Projects

ByteBazaar (Multi-vendor E-Commerce Webapp)

- Implemented JWT authentication and role-based access control by building custom Express.js middleware and third-party API connections for a three-role multi-vendor platform.
- Built a responsive React.js frontend with TypeScript using component-based architecture and Bootstrap, supporting distinct dashboards for admin, seller, and buyer roles
- Optimized data persistence by designing efficient Mongoose schemas to manage complex relationships between users, vendors, and products

Portfolio Website

- Built and deployed a personal portfolio using React by implementing smooth-scroll navigation and a resume download feature, resulting in a live site accessible at affan-portfolio-08.vercel.app
- Optimized global accessibility by deploying the application via Vercel with GitHub integration

Taskly (Task Manager)

- Developed a task management app with persistent state by implementing React hooks and local storage, resulting in data retention across browser sessions without a backend
- Handled real-time CRUD operations by managing component-level state React hooks resulting in instant UI updates on task creation and deletion
